### PRK 96 Ex n

### Retro-reflective photoelectric sensors with polarisation filter

0 ... 8.5m

- Retro-reflective photoelectric sensor for detection of transparent media
- Robust metal housing with glass cover, protection class IP 67/IP 69K for industrial application
- Sensitivity adjustment
- The autocollimation principle used ensures that the device functions reliably over the entire range (0 ... max.)
- High switching frequency for detection of fast events
- Connection via terminal compartment
- Ex II 3G Ex nA op is IIB T4 Gc X
- €x II 3D Ex tc IIIC T70°C Dc IP67 X

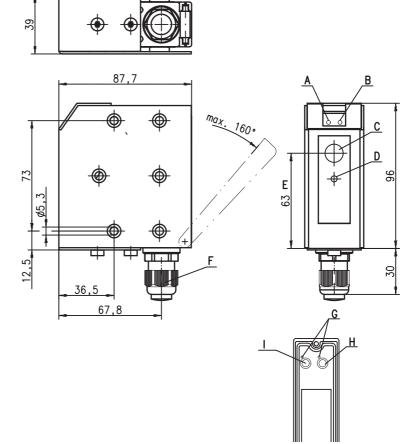

### **Accessories:**

### (available separately)

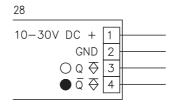

- Mounting systems (BT 96, UMS 96, BT 450.1-96)
- Reflectors
- Reflective tapes
- Alignment aid ARH 96
- Interlocking guard K-VM12-Ex (Part No. 50109217)

### **Dimensioned drawing**

- A Green indicator diode
- B Yellow indicator diode
- **C** Receiver
- **D** Transmitter
- E Optical axis
- F Screwed cable gland M16x1,5 for  $\varnothing$  5 9mm
- G Yellow indicator diode
- H Scanning range adjustment Q2
- I Scanning range adjustment Q<sub>1</sub>

### **Electrical connection**

We reserve the

## Order guide

With terminals

Designation Part No. PRK 96M/P-2838-28 Ex n 50109523

### Remarks

#### Operate in accordance with intended use!

- This product is not a safety sensor and is not intended as personnel protection.
- The product may only be put into operation by competent persons.
- ♦ Only use the product in accordance with the intended use.

### Notices for the safe use of sensors in potentially explosive areas

This document is valid for devices with the following classifications:

Device group	Device category	Equipment protection level	Zone
II	3 <b>G</b>	Gc	Zone 2
II II	3D	Dc	Zone 22

#### Attention!

- Check whether the equipment classification corresponds to the requirements of the application.
- The devices are not suited for the protection of persons and may not be used for emergency shutdown purposes.
- A safe operation is only possible if the equipment is used properly and for its intended purpose.
- Electrical equipment may endanger humans and (where applicable) animal health, and may threaten the safety of goods if used incorrectly or under unfavorable conditions in potentially explosive areas.
- The applicable national regulations (e.g. EN 60079-14) for the configuration and installation of explosion-proof systems must be observed without fail.

#### **Installation and Commissioning**

- The devices must only be installed and commissioned by trained electricians. They must be aware of the regulations and operation of explosion-proof equipment.
- To prevent unintentional separation under voltage, devices with connector (e.g. Series 46B) must be equipped with a safeguard or a mechanical interlocking guard (e.g. K-VM12-Ex, part no. 50109217). The warning sign "Do not disconnect under voltage" that is supplied with the device must be attached to the sensor or its mounting bracket so that it is clearly visible.
- Devices with terminal compartment lid (e.g. Series 96) must only be commissioned if the terminal compartment lid of the device
  is properly sealed.
- Connection cables and connectors must be protected from excessive or unintended pulling or pushing strain.
- Prevent dust deposits from forming on the devices.
- Metallic parts (e.g. housing, mounting devices) are to be integrated into the potential equalization to prevent electrostatic charge.

#### **Maintenance**

- No changes may be made to explosion-proof devices.
- Repairs may only be performed by a person trained for such work or by the manufacturer.
- Defective devices must be replaced immediately.
- Cyclical maintenance is generally not necessary.
- Depending on the environmental conditions, it may occasionally be necessary to clean the optical surfaces of the sensors.
   This cleaning must only be performed by persons trained for this task. We recommend using a soft, damp cloth. Cleaning agents that contain solvents must not be used.

#### **Chemical resistance**

- The sensors demonstrate good resistance against diluted (weak) acids and bases.
- Exposure to organic solvents is possible only under certain circumstances and only for short periods of time.
- Resistance to chemicals must be examined on a case by case basis.

#### **Special conditions**

- The devices must be installed in such a way that they are protected from direct exposure to UV rays (sunlight).
- Static charge on plastic surfaces must be avoided.
